Iron Fist Academy

The complete, very simple guide to the website, the desktop app and the phone app. No computer experience needed.

Version for app 0.3 · October 2026 · An unofficial Tekken 8 training tool. Not made by or connected to Bandai Namco.

How to use this guide

This guide explains **everything**, step by step, in plain words. You do not need to know anything about computers or about Tekken. If a word is new, look it up in **Part 1**.

Each part of the app has its own section with a **picture** of what it looks like, **what it is for** and **exactly what to press**.

> **HOW TO READ THE STEPS**
>
> Numbered red circles are steps. Do step 1, then step 2, and so on. Words in **bold** are things you will see on the screen, like the name of a button.

What's inside

1. **Part 1.** Words you need to know
2. **Part 2.** Getting the app: website, phone, Windows, Linux
3. **Part 3.** The very first start
4. **Part 4.** Finding your way around the screen
5. **Part 5.** Every tab, one by one
6. **Part 6.** Controllers and the keyboard
7. **Part 7.** Saving, players and syncing your devices
8. **Part 8.** Desktop app extras: Import progress and Uninstall
9. **Part 9.** Something went wrong? Fixes
10. **Part 10.** Your first week of training

Part 1. Words you need to know

Computer and phone words

Word	What it means
Click	On a computer: move the arrow with the mouse onto something and press the **left** mouse button once.
Tap	On a phone: touch something on the screen with your finger once, quickly.
Scroll	Move the page up or down to see more. Computer: turn the little wheel on the mouse. Phone: slide your finger up or down on the screen.
Button	A box with words on it (for example **Start**). You click or tap it to make something happen.
Tab	One page of the app, like a page in a book (for example the **Academy** tab). You choose tabs from the menu.
Menu	The list of all tabs. On a computer it is always on the left. On a phone you open it with the ☰ button (three lines) at the top left.
Browser	The program you use to visit websites: Firefox, Chrome, Edge or Safari.
Website	The app inside your browser. Its address is `gaberpet.github.io/iron-fist-academy`.
Download	Copy a file from the internet onto your computer or phone.
Install	Put a program onto your computer or phone so you can open it from its own icon.
Icon	A small picture you click or tap to open something. Our icon is a white diamond on black.
Drop-down	A box with a small arrow ▾. Click it and a list opens; click one thing in the list to choose it.
Pop-up	A small window that appears on top of the page, asking you something. Click a button in it to close it.

Tekken words

Word	What it means
Character	The fighter you play, for example Anna, Jin or King. There are 42.
Move	One attack, like a punch or a kick. Every character has over 100.
Combo	Several moves in a row that all hit, one after the other. Usually after you knock the opponent into the air.
Block	Defending so an attack does not hurt you. Hold **back** (away from the opponent).
High, mid, low	Where an attack hits. **High**: you can duck under it. **Mid**: you must block standing. **Low**: you must block crouching (hold down-back).
Frame	A tiny piece of time: 60 frames = 1 second. Tekken measures speed in frames.
Startup (i10, i15…)	How fast a move hits. **i10** means it hits after 10 frames. Smaller = faster.
On block (+3, -12…)	Who can move first after a blocked attack. **Plus (+)** = the attacker is first. **Minus (−)** = the defender is first. **-10 or worse** means the attacker can be hit back for free.
Punish	Hitting back for free after you block a move that left the opponent open.
Launcher	A move that knocks the opponent into the air so you can do a combo.
Counter hit (CH)	Hitting the opponent while they are pressing a button. Some moves do much more on a counter hit.
Heat	A power mode, once per round. Turn it on with **2+3** or certain moves. Your moves get stronger.
Rage	When your health is very low you do more damage and can use a big **Rage Art** attack.
Stance	A special position some characters go into, with its own moves (for example Hwoarang's Flamingo).

How moves are written (notation)

Tekken writes moves with short codes. The app also shows them as pictures of your controller buttons.

Code	Means	On a PlayStation controller
1	Left punch	 square
2	Right punch	 triangle
3	Left kick	 cross
4	Right kick	 circle
f / b	Forward / back	Push the stick or D-pad towards / away from the opponent
u / d	Up / down	Push up / down
df, db, uf, ub	Diagonals: down-forward, down-back, up-forward, up-back	Push between the two directions
+ (for example **1+2**)	Press at the **same time**	Both buttons together
, (for example **1,2**)	Press **one after the other**	First 1, then 2
F, B (capital)	Hold that direction	Keep holding
ws	While standing up from a crouch	Let go of down, then press

Example: **df+2** means: push down-forward and press 2 () at the same time.

Part 2. Getting the app

Iron Fist Academy comes in four forms. They all do the same things. Pick the one that fits you.

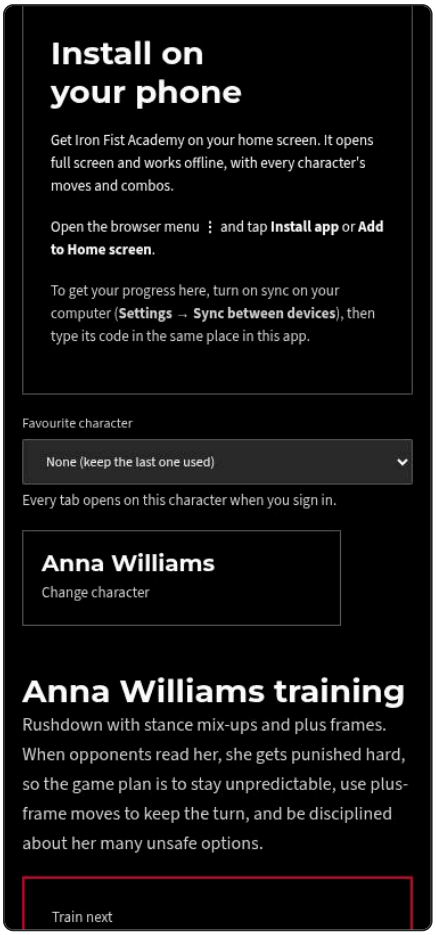

Where	What you need	Good for
Website	Any browser, internet	Trying it right now, nothing to install
Phone app	An Android phone or iPhone	Looking at moves and combos anywhere, even offline
Windows app	A Windows 10 or 11 computer	Training with a controller, offline
Linux app	A Linux computer	Same as Windows

The website

1. Open your browser (Firefox, Chrome, Edge or Safari).
2. Click the long box at the very top of the browser (the address bar).
3. Type `gaberpet.github.io/iron-fist-academy` and press the **Enter** key.
4. The app opens. Go to Part 3.

> **TIP**
>
> Press **Ctrl** + **D** to save it as a bookmark, so you can open it again with one click.

The phone app

The Dashboard on a phone shows this card with the steps for your phone.

1. On your phone, open **Chrome** or **Firefox** and go to `gaberpet.github.io/iron-fist-academy`.
2. Choose **Allow saving** and make your player (see Part 3).
3. Tap the ⋮ button (three dots, top right or bottom right).
4. Tap **Install** (it may say **Install app** or **Install and create shortcut**). If you only see **Create shortcut** or **Add to Home screen**, tap that.
5. Tap **Install** again in the small window that pops up.
6. Go to your phone's home screen. The new **Iron Fist** icon is there. Tap it to open the app.

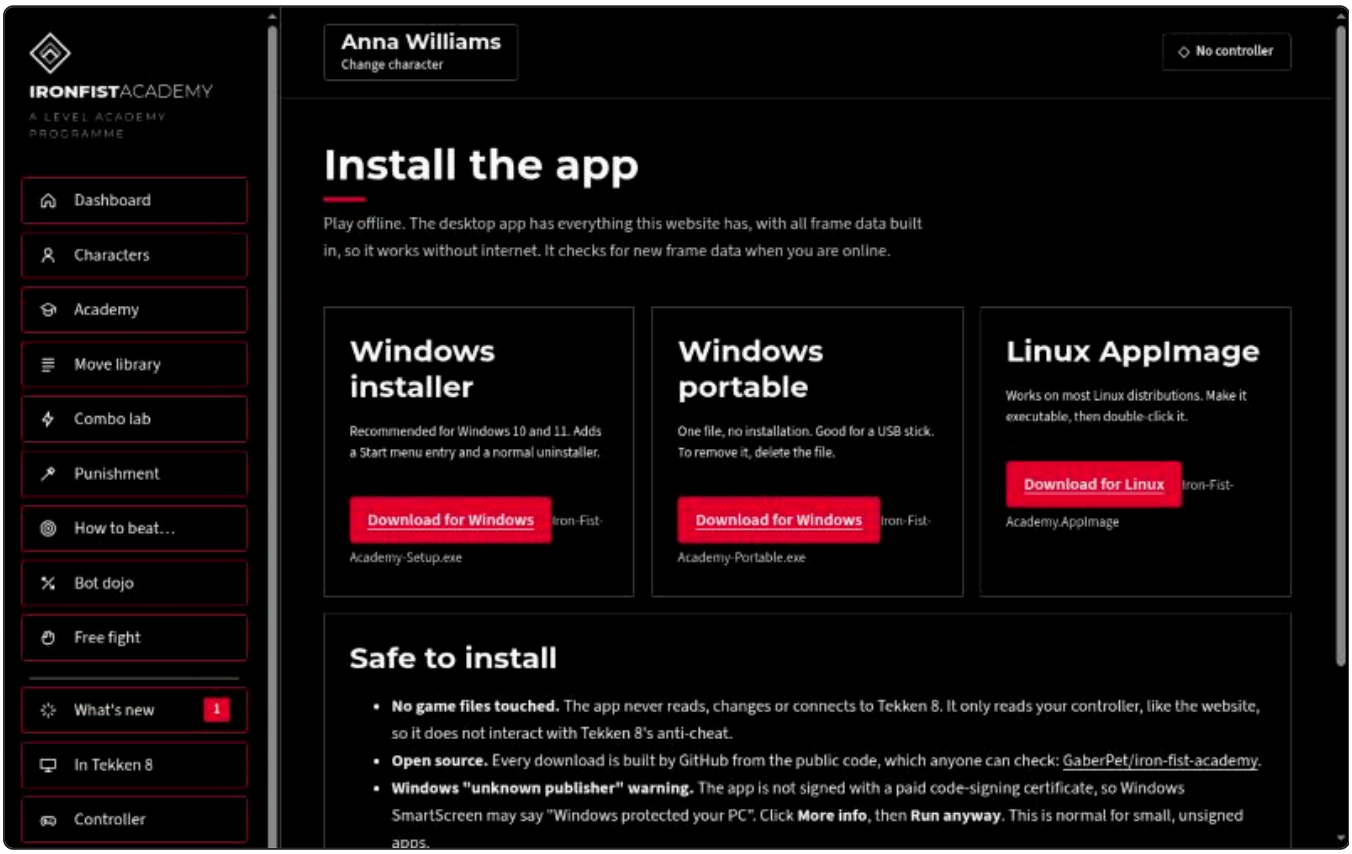

iPhone: open the site in **Safari**, tap the **Share** button (square with an arrow up), then **Add to Home Screen**.

> **GOOD TO KNOW**
>
> When it is installed properly, the app opens **without** the browser's address bar at the top. The first time you open it with internet, it saves all characters, so later it works without internet too. Fights (Bot dojo and Free fight) are hidden on phones because they need a controller or keyboard.

The Windows app

1. On your computer, open the website and click **Install the app** in the menu on the left.
2. Under **Windows installer**, click **Download for Windows**. Wait until the download finishes.
3. Open the file **Iron-Fist-Academy-Setup.exe** (click it at the top right of the browser, or find it in your **Downloads** folder).
4. A blue window may appear: **"Windows protected your PC"**. This is normal for small apps. Click **More info** (small text), then click **Run anyway**.
5. The installer opens. Click **Next**, then **Install**, then **Finish**.

6. Open **Iron Fist Academy** from the Start menu or the desktop icon.

The **Install the app** tab on the website. The three red buttons download the apps.

Windows portable is the same app as one single file with no installer. Good for a USB stick. To remove it, just delete the file.

The Linux app

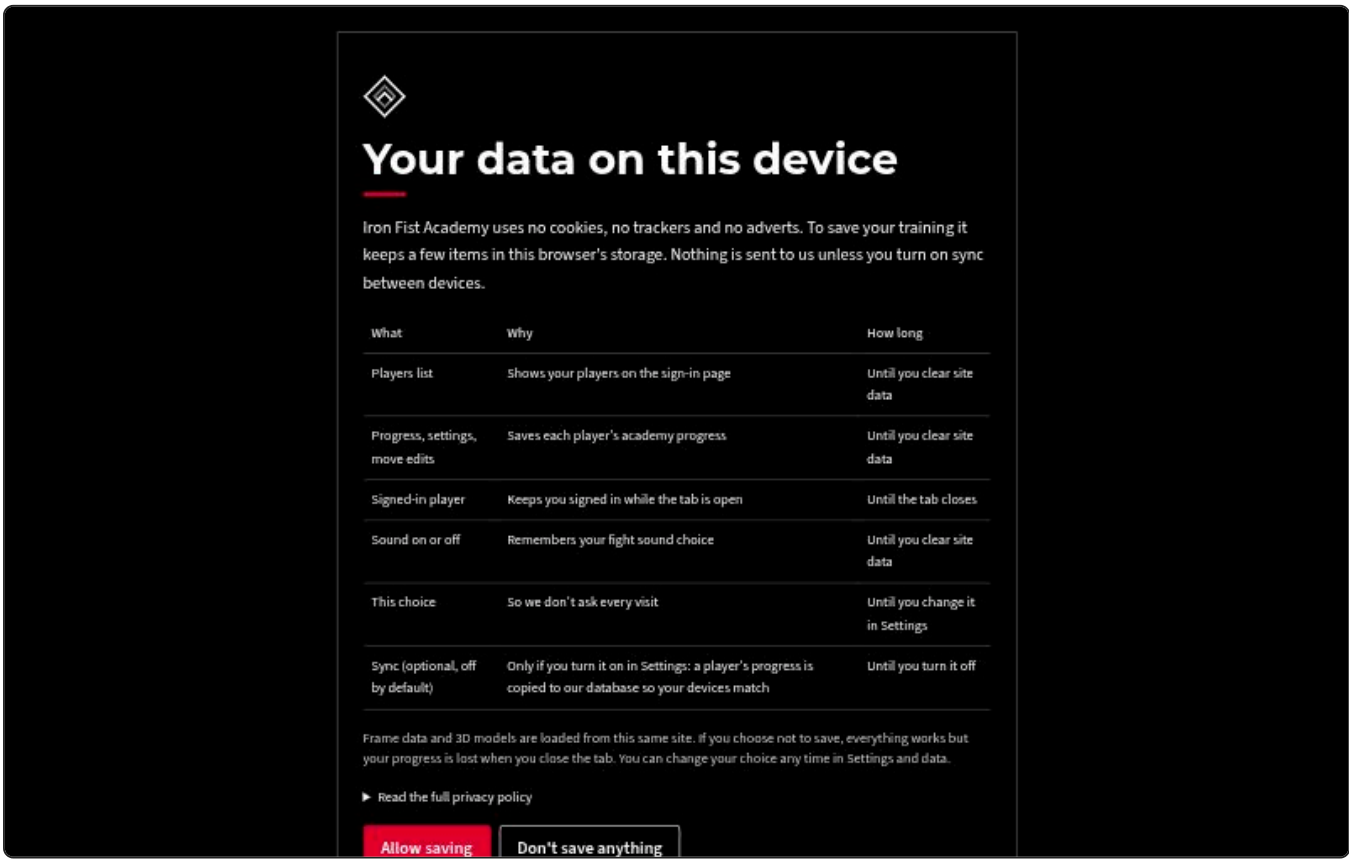

1. On the **Install the app** tab, click **Download for Linux**.
2. Find **Iron-Fist-Academy.AppImage** in your Downloads folder.
3. Right-click it, choose **Properties**, open **Permissions** and tick **Allow executing file as program** (or "Is executable").
4. Double-click the file. The app opens.

New versions

The website and the phone app update themselves. The desktop app does not: when a new version comes out, download it again from **Install the app** and install it over the old one. Your progress stays.

Part 3. The very first start

Step 1: the privacy question

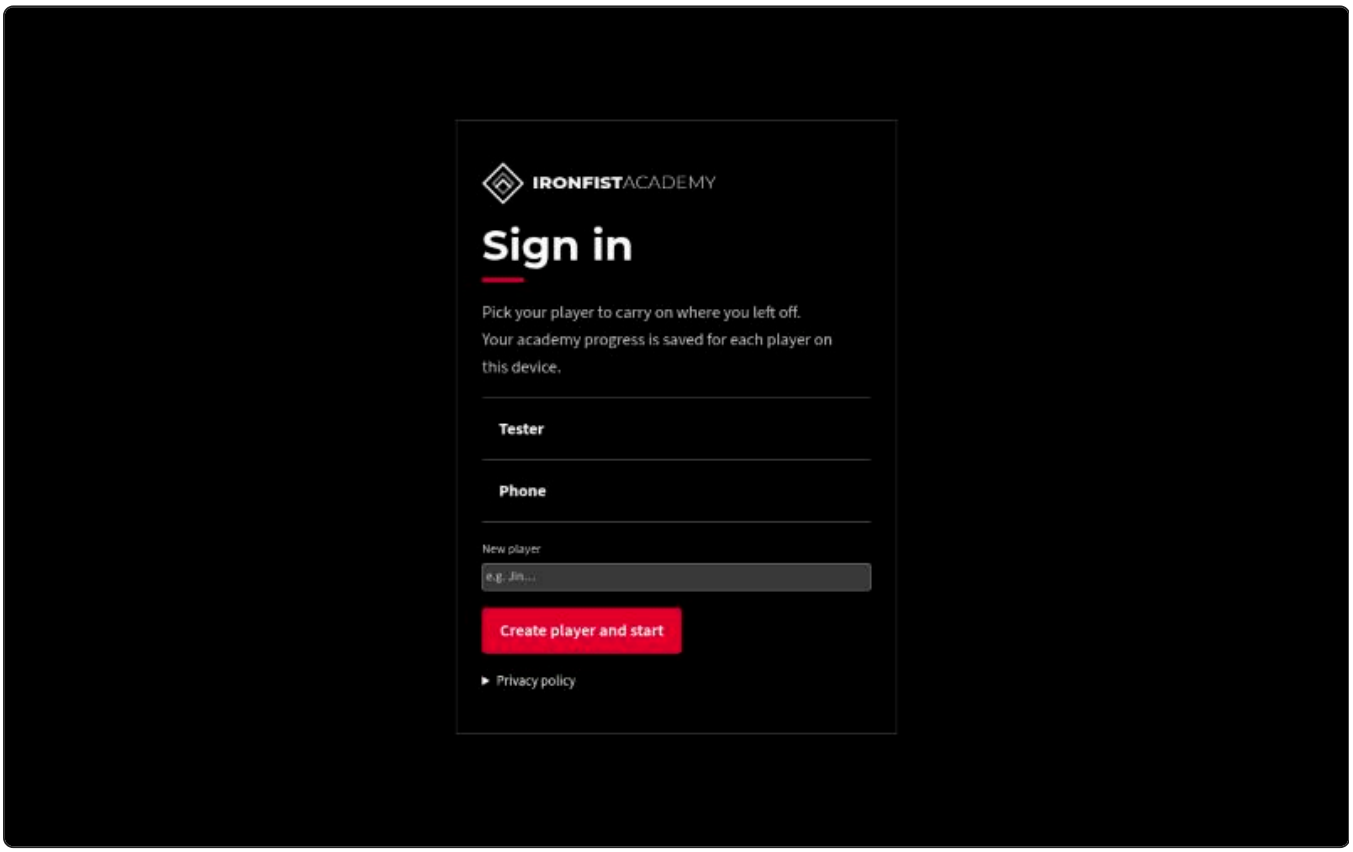

The first time, the app asks if it may save your training.

- Click **Allow saving**. Then your progress is remembered. **Choose this.**
- If you click **Don't save anything**, everything still works, but your progress disappears when you close the page.

The app has no ads, no trackers and no cookies. The table explains what it saves and why. You can change your answer later in **Settings and data**.

> **DESKTOP APP**
>
> The desktop app skips this question: it always saves, in a folder on your own computer.

Step 2: make your player

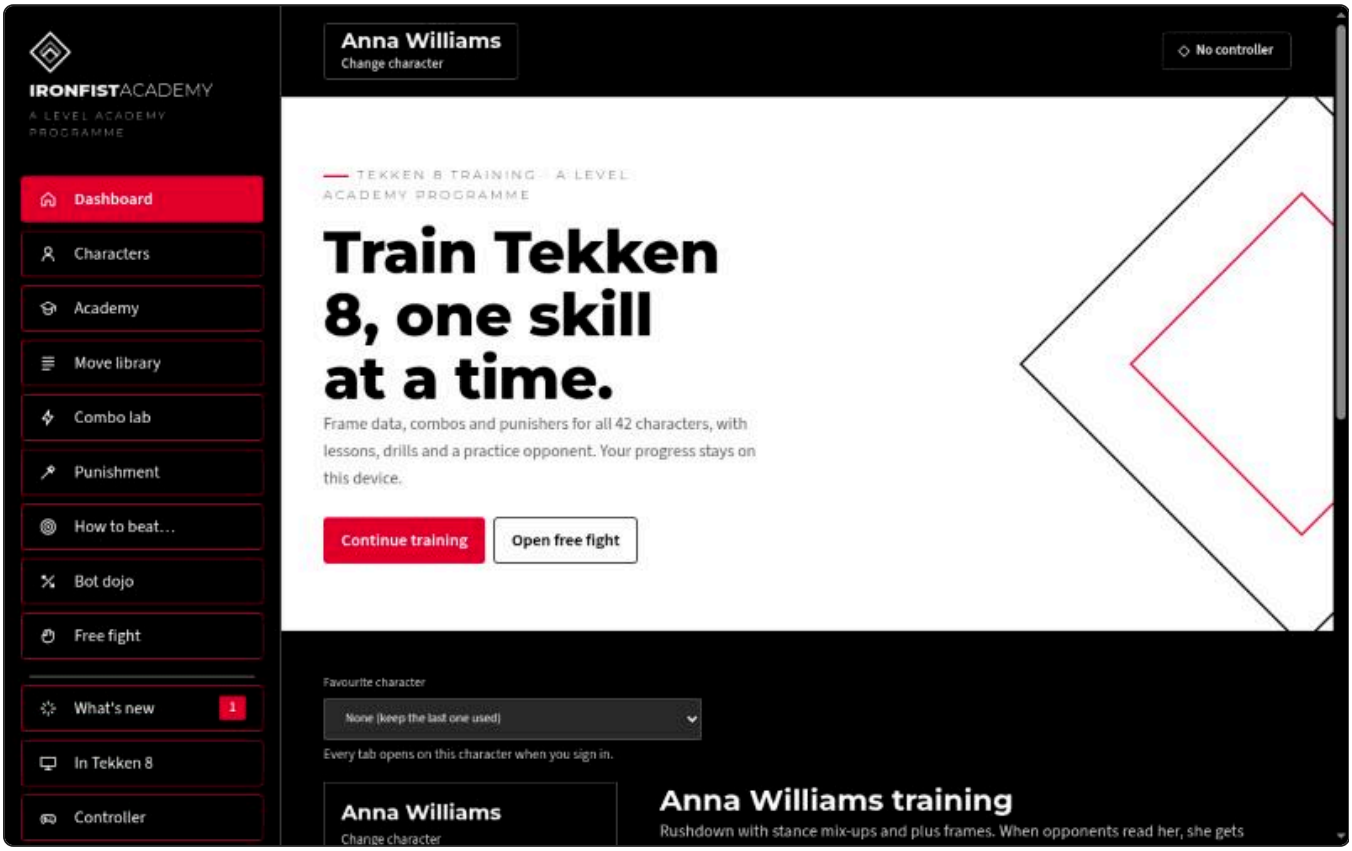

The sign-in screen. Here two players already exist: "Tester" and "Phone".

1. Click the box under **New player** (or **Player name**).
2. Type a name for yourself. Any nickname is fine.
3. Click **Create player and start**.

Next time, just click your name in the list. Each player has their own progress, so a brother, sister or friend can have their own player on the same device.

> **IMPORTANT**
> Player names are **not** passwords. Anyone using the same device can click any player.

Part 4. Finding your way around

The main screen on a computer.

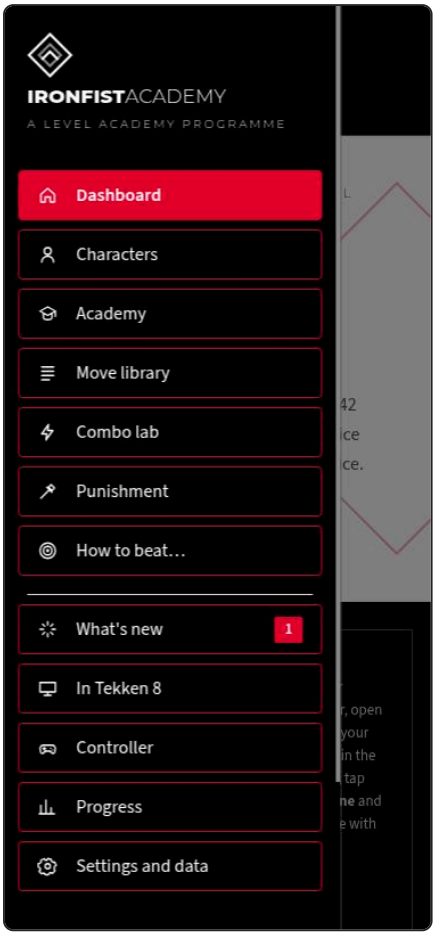

The menu (left side)

The red-outlined boxes on the left are the **menu**. Click one to go to that tab. The tab you are on is filled red. Near the bottom of the menu it shows which **player** is signed in, with a **Switch player** link.

The top bar

- **Character box** (top left, for example "Anna Williams · Change character"): the character you are training. Click it to choose another one. Every tab then shows that character.
- **Controller box** (top right): says **No controller** or the name of your controller when one is connected.

On a phone

The menu is hidden to save space. Tap the ☰ button (three lines) at the top left. The menu slides in. Tap a tab to go there; the menu closes by itself. Tap outside the menu to close it without choosing.

On phones, **Bot dojo**, **Free fight** and **Install the app** are not in the menu (they need a computer).

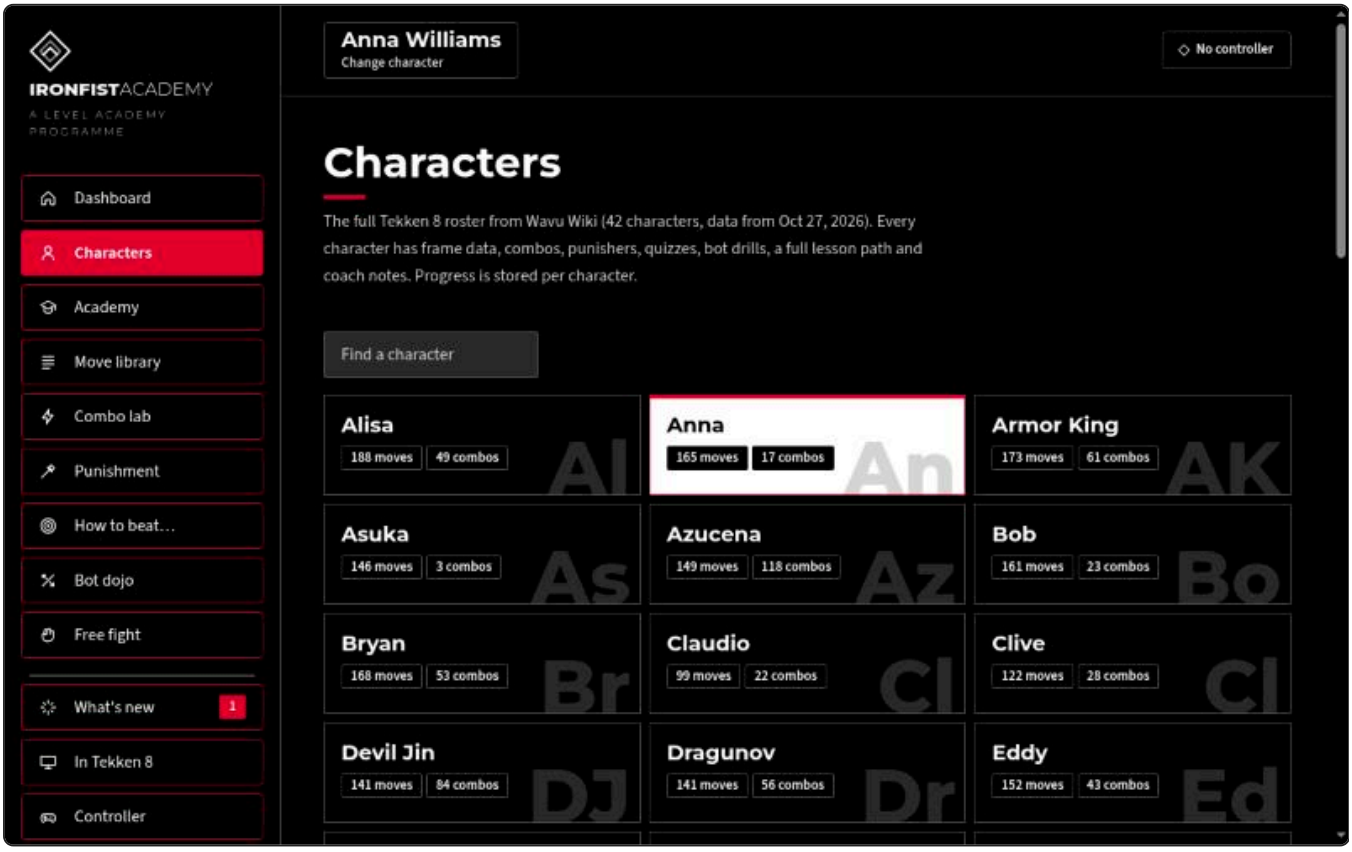

Part 5. Every tab, one by one

Dashboard

What it is: the home page. It suggests what to train next and shows how much you have practised.

- **Continue training**: takes you to the next thing you should do. If you don't know what to do, press this.
- **Open free fight**: starts a fight against the computer (computers only).
- **Favourite character**: choose your main character from the drop-down. Every time you sign in, all tabs open on that character.
- Further down: your next lesson, how many minutes you practised today, and a **practice session timer** (click **Start**, train until it reaches 00:00).

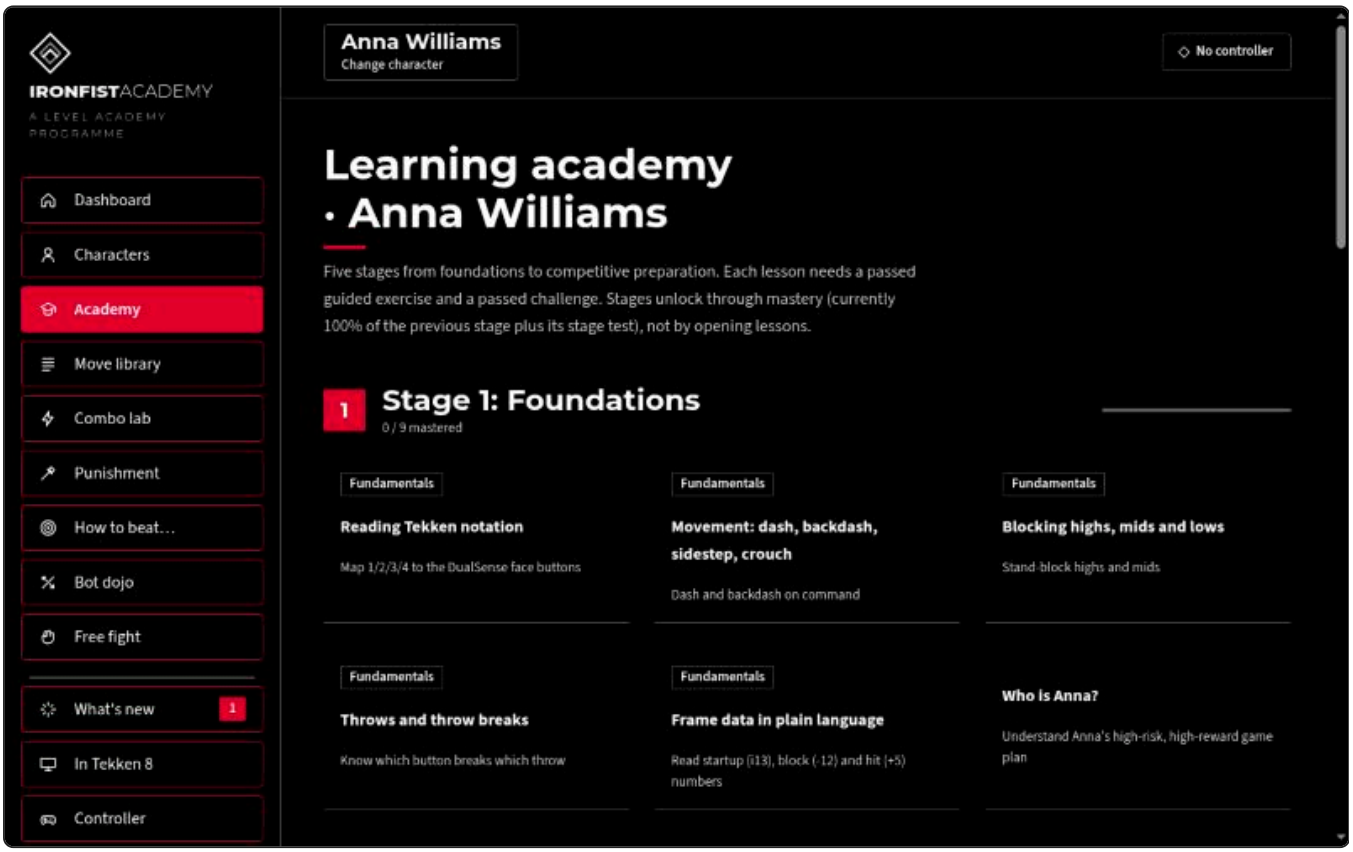

Characters

What it is: all 42 characters. Click one to make it your active character. Below the grid you see that character's profile: how they play, strengths, weaknesses, stances and Heat moves.

How: type a name in **Find a character** to search, then click the character's box.

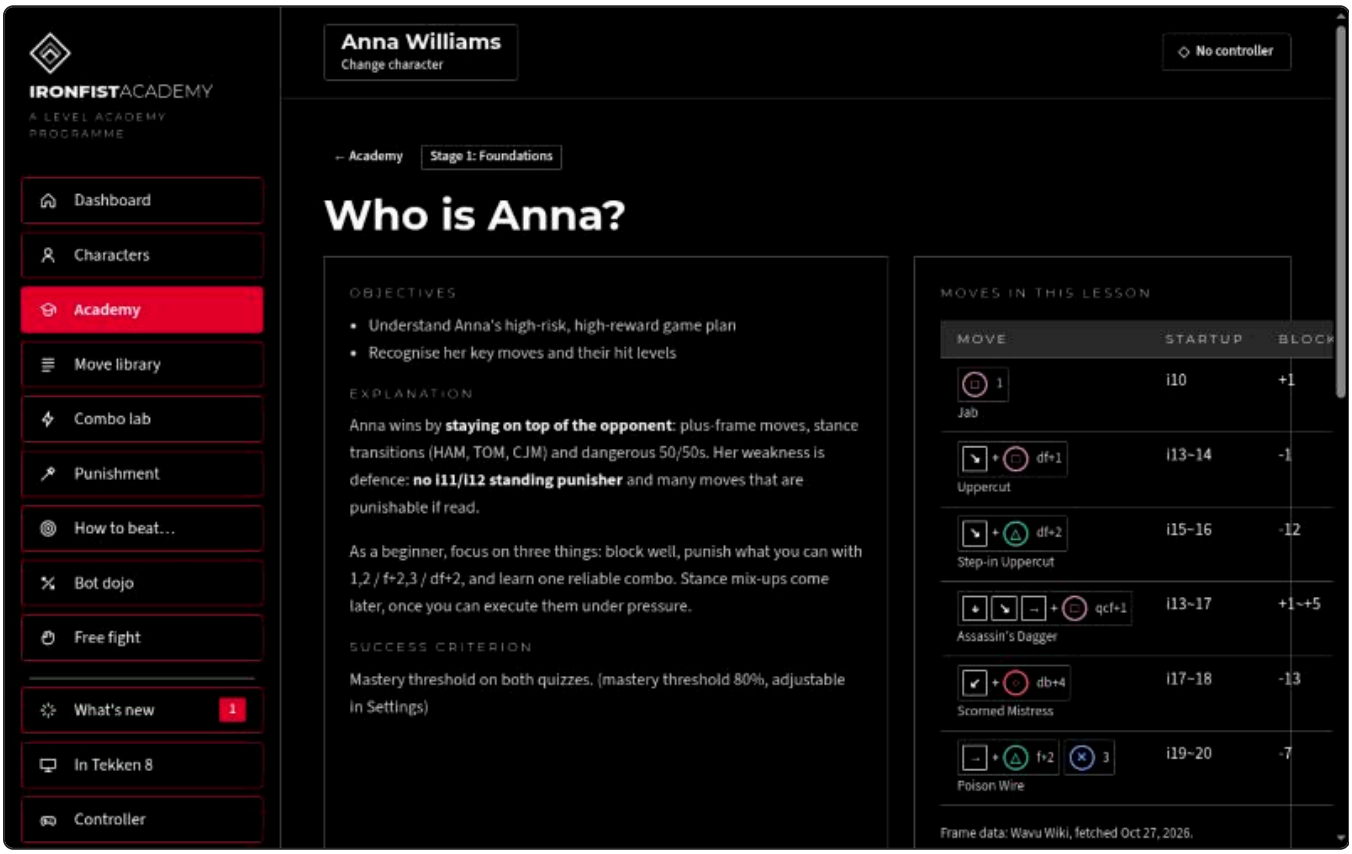

Academy

What it is: a school for your character, with lessons from beginner to expert, in **5 stages**: Foundations, Core Combat, Reliable Execution, Advanced Character Play and Competitive Preparation.

1. Click a lesson box (start at the top left of Stage 1).
2. Read the **Explanation**. The moves are shown with your controller buttons.
3. Do the **Guided exercise** (it shows you what to press), then the **Challenge** (no help).

4 Pass both and the lesson is **Mastered**. Click **← Academy** to go back.

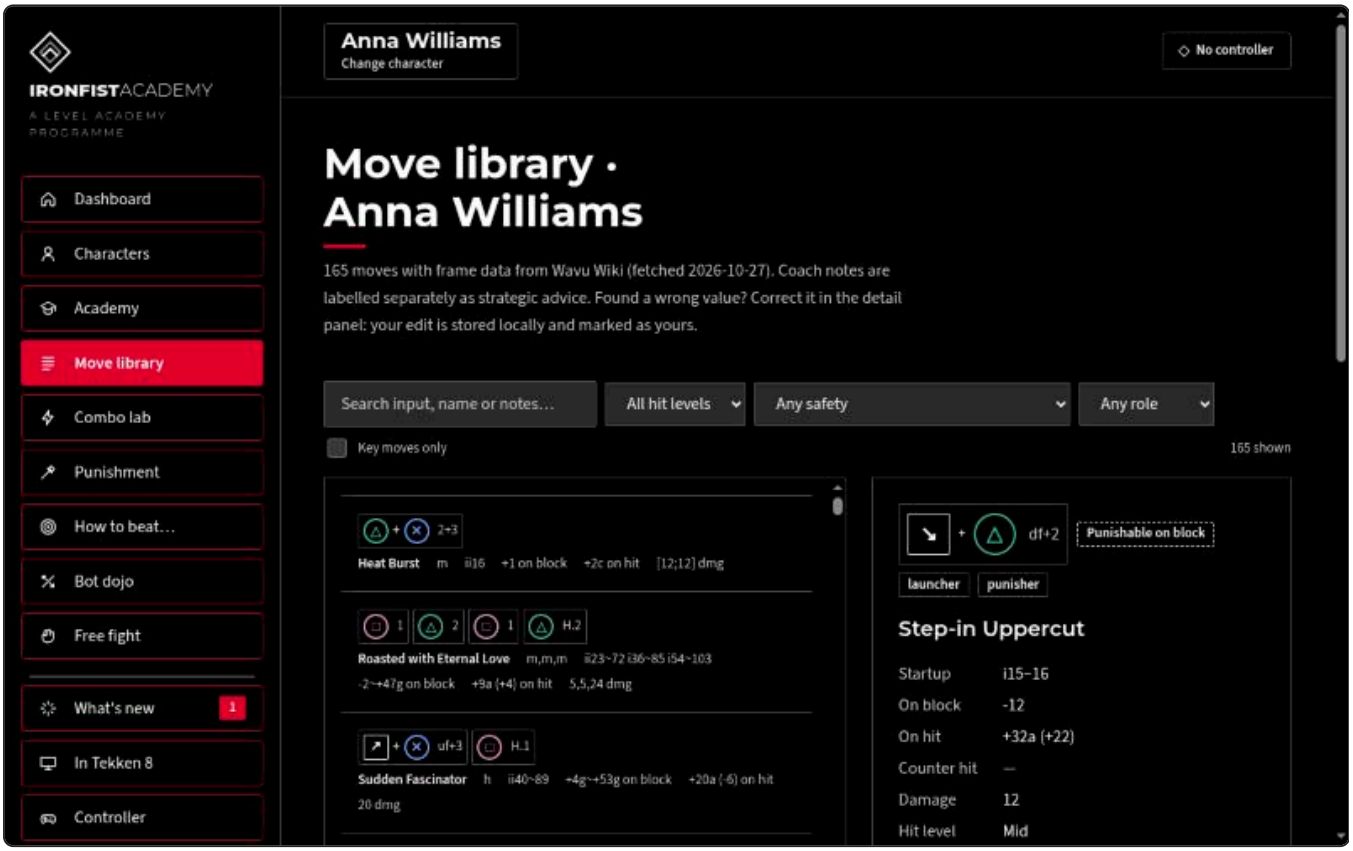

A lesson: objectives and explanation on the left, the moves with their speed and frames on the right.

LOCKED LESSONS 🔒

A stage opens when you have mastered the stage before it **and** passed its **Stage test**. Grey "Fundamentals" lessons teach Tekken basics and are the same for every character.

Move library

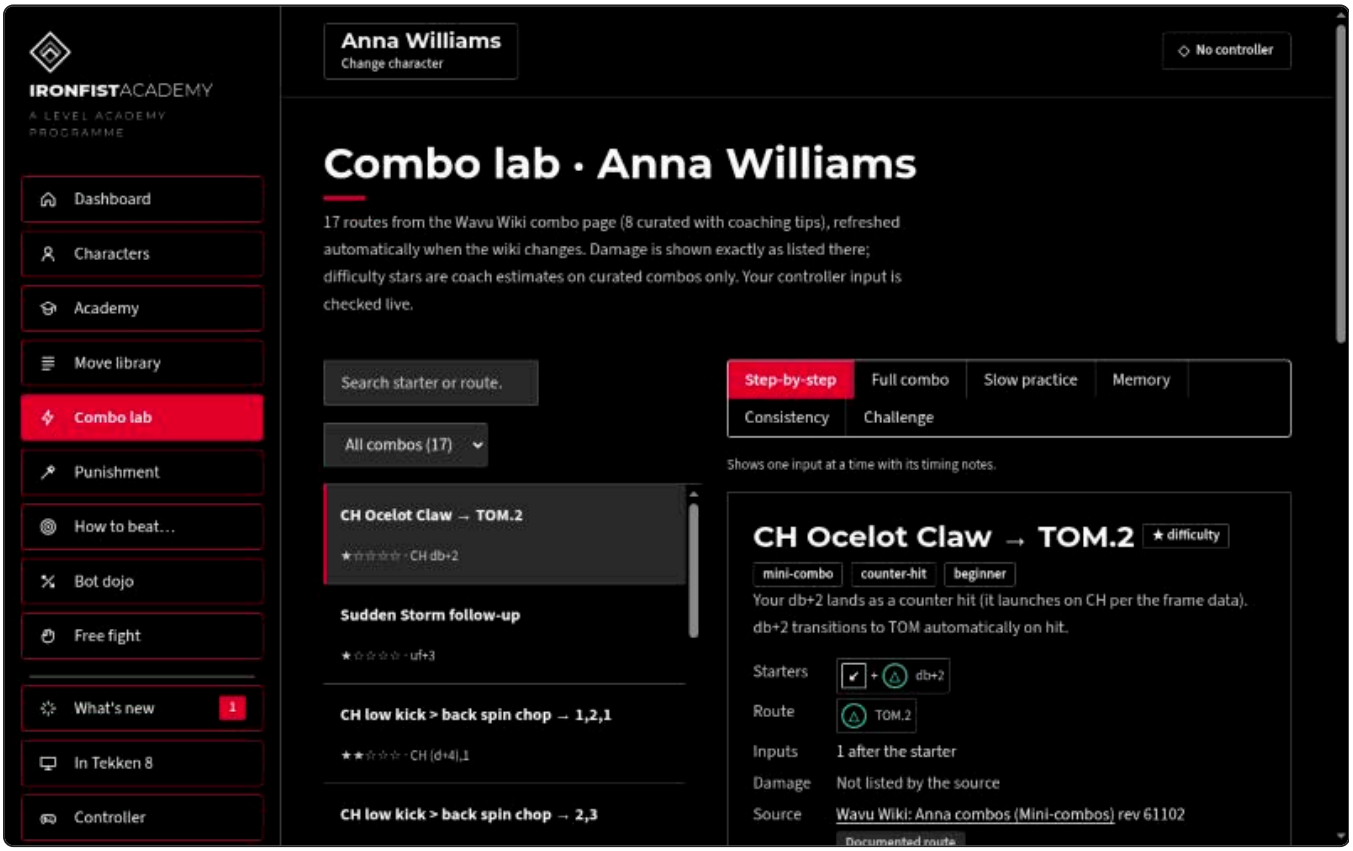

What it is: every move of your character with its numbers. Each row shows the buttons as pictures, the name, the hit level, the speed (i15…), what happens on block and on hit, and the damage.

- **Search box**: type a move (like `df+2`) or a name.
- **Drop-downs**: show only highs, mids or lows; only safe or unsafe moves; only launchers, pokes and so on. Tick **Key moves only** for the most important ones.
- **Click a move**: the box on the right (below on a phone) shows all its details, coach notes (when to use it, how the opponent beats it) and a **safety** label like **Punishable on block**.

If a number is wrong, you can correct it in the details box. Your correction is saved only for you and marked as yours.

Combo lab

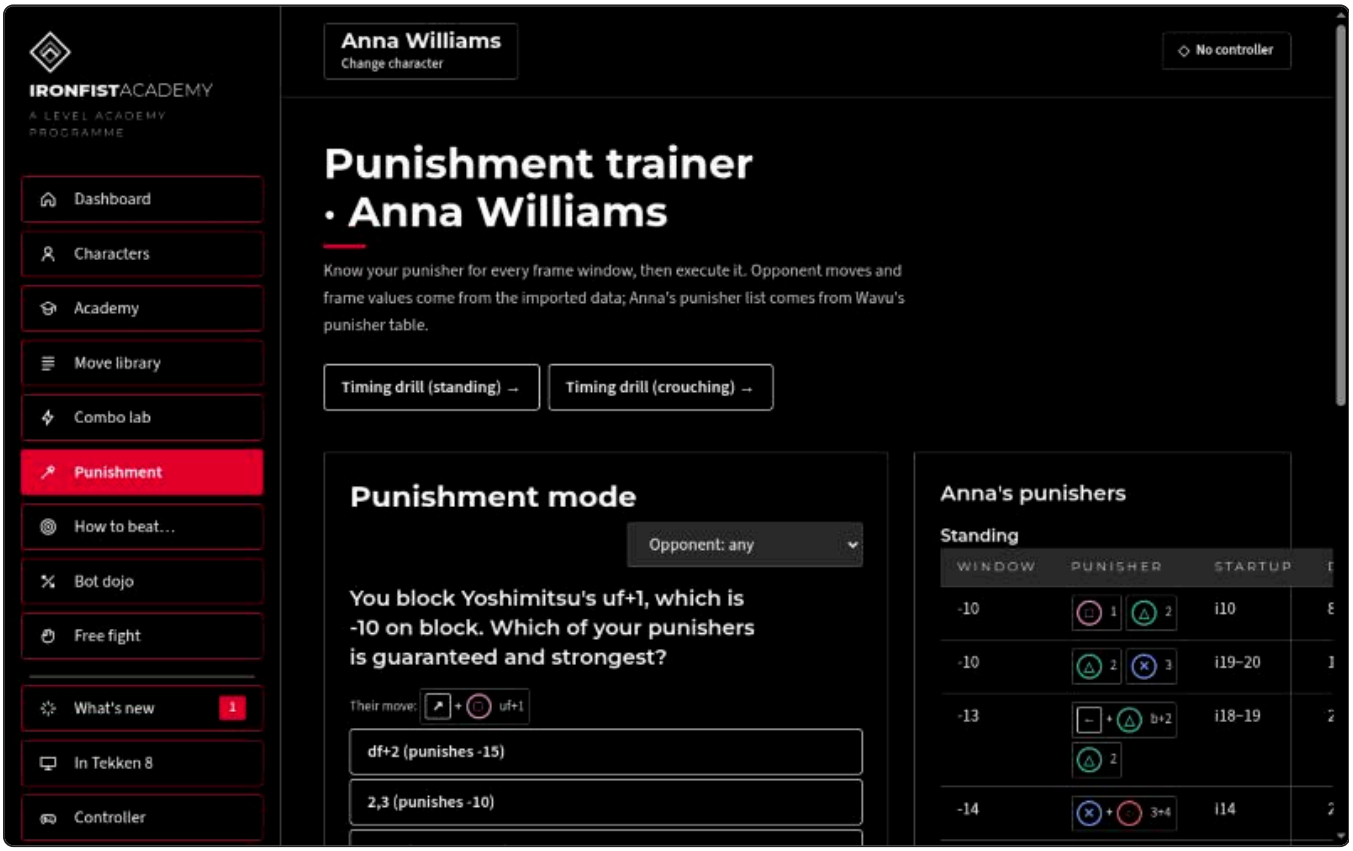

What it is: a trainer for combos. The list on the left has every combo; the right side checks your controller as you do it.

1. Click a combo in the list on the left (stars show how hard it is: ★ easy, ★★★★★ hard).
2. Choose a **mode** on the right.
3. Do the combo with your controller or keyboard. The app lights up each step green when you get it right.

Mode	What it does
Step-by-step	Shows one input at a time, with timing tips. Start here.
Full combo	The whole combo; your progress lights up live.
Slow practice	No time limit. Learn the order first.
Memory	The next inputs are hidden. Do it from memory.
Consistency	Land it several times in a row to master it. A mistake resets the count.
Challenge	You get a situation and must pick the right combo, then do it.

Common execution mistakes under each combo tell you what usually goes wrong.

Punishment

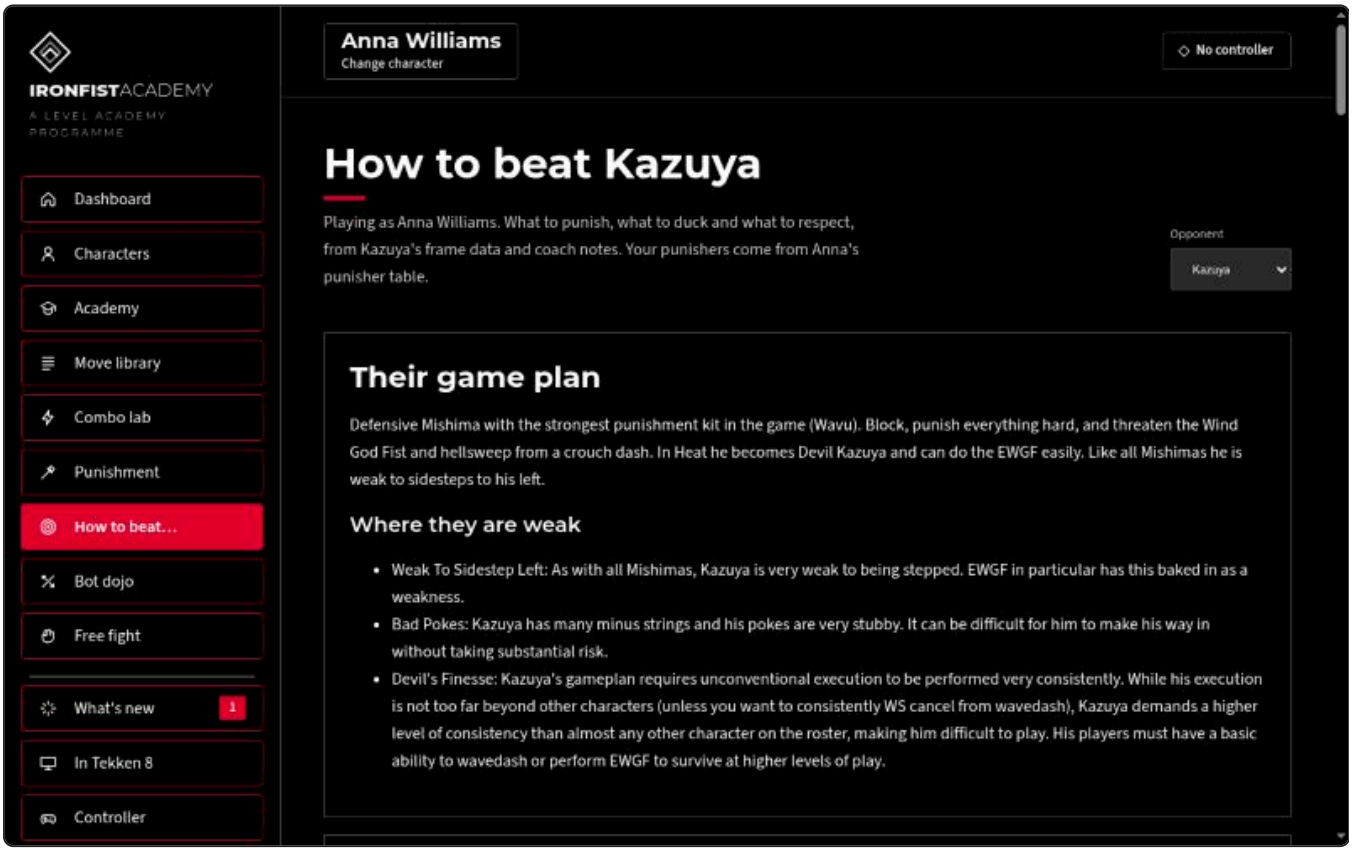

What it is: a quiz that teaches you what to hit back with after you block something.

1. Read the question: "You block *a move*, which is *-12* on block. Which of your punishers is guaranteed and strongest?"
2. Click the answer you think is right.
3. Then do the move on your controller to finish the round.

On the right is your character's **punisher list**: which move to use for each "minus" number. **Timing drill (standing / crouching)** opens the same practice in the Bot dojo (computers only).

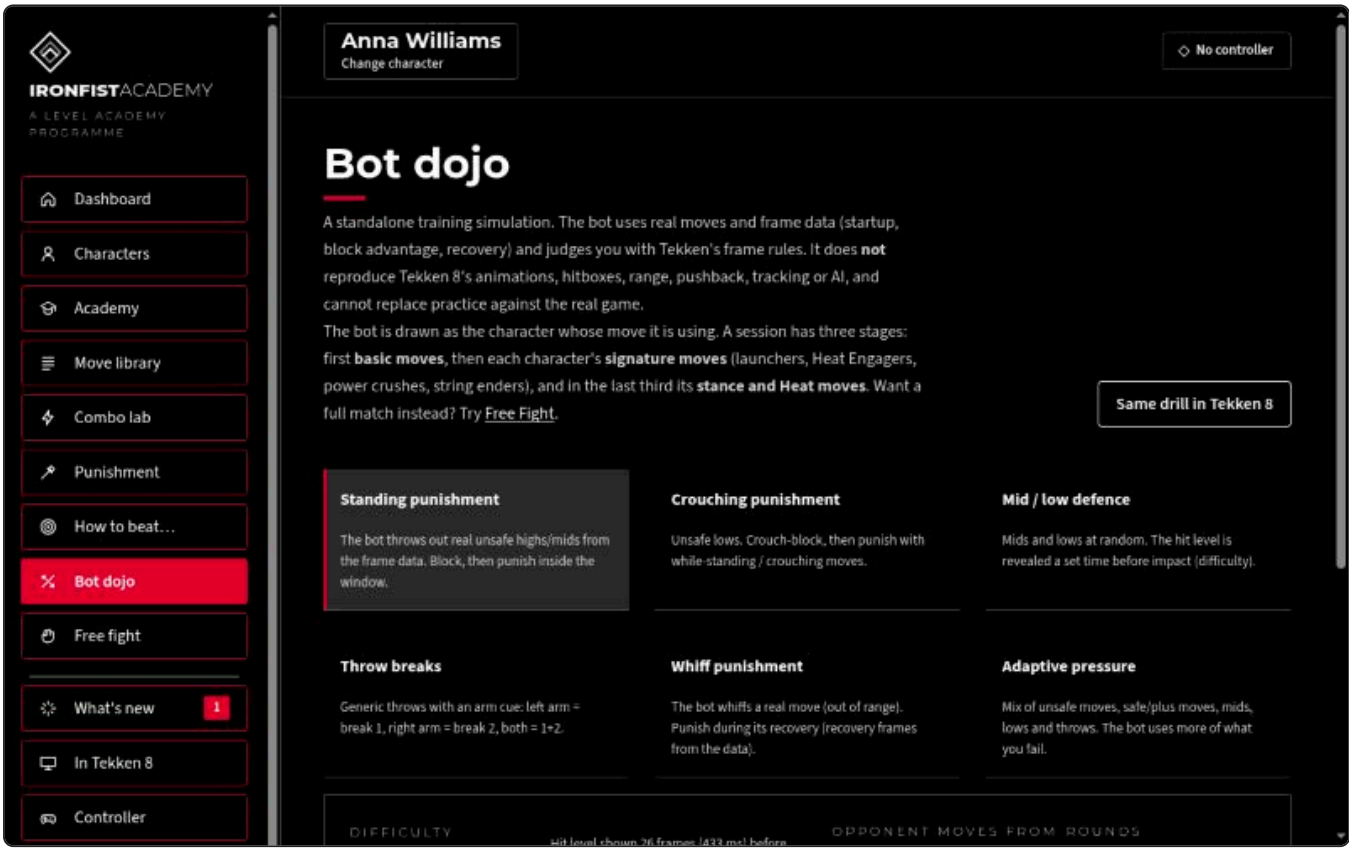

How to beat...

What it is: a cheat sheet against one opponent. Choose the opponent in the **Opponent** drop-down at the top right. You get:

- **Their game plan** and **where they are weak**.
- **Their key moves and how to beat them.**
- **Punish these**: their moves you can hit back after blocking, with **your** best punisher for each.
- **Duck these**: strings that end high, so you can crouch under the end.
- **Respect these**: their moves that are still their turn after you block. Don't press buttons after those.

Bot dojo (computers only)

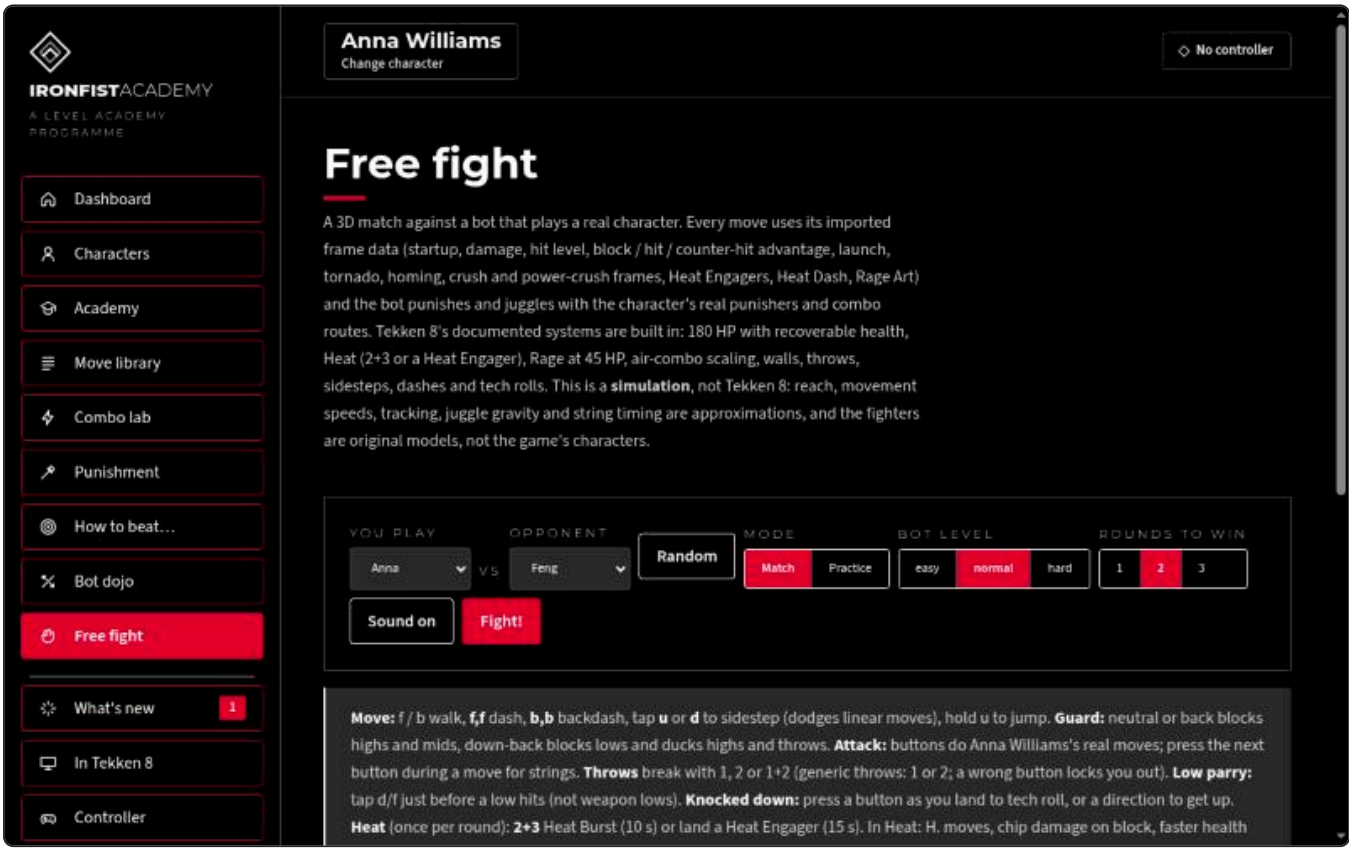

What it is: a practice room with a computer opponent that does one thing again and again, so you can practise one skill. It uses real move data, but it is a simulation, not the real game.

1. Click a drill: **Standing punishment**, **Crouching punishment**, **Mid / low defence**, **Throw breaks**, **Whiff punishment** or **Adaptive pressure**. Each box explains what it trains.
2. Below, choose the **difficulty** (easy, normal, hard), which characters' moves the bot uses, and how many **rounds**.
3. Click **Start drill** and use your controller or keyboard.

Same drill in Tekken 8 tells you how to set up the same practice inside the real game.

Free fight (computers only)

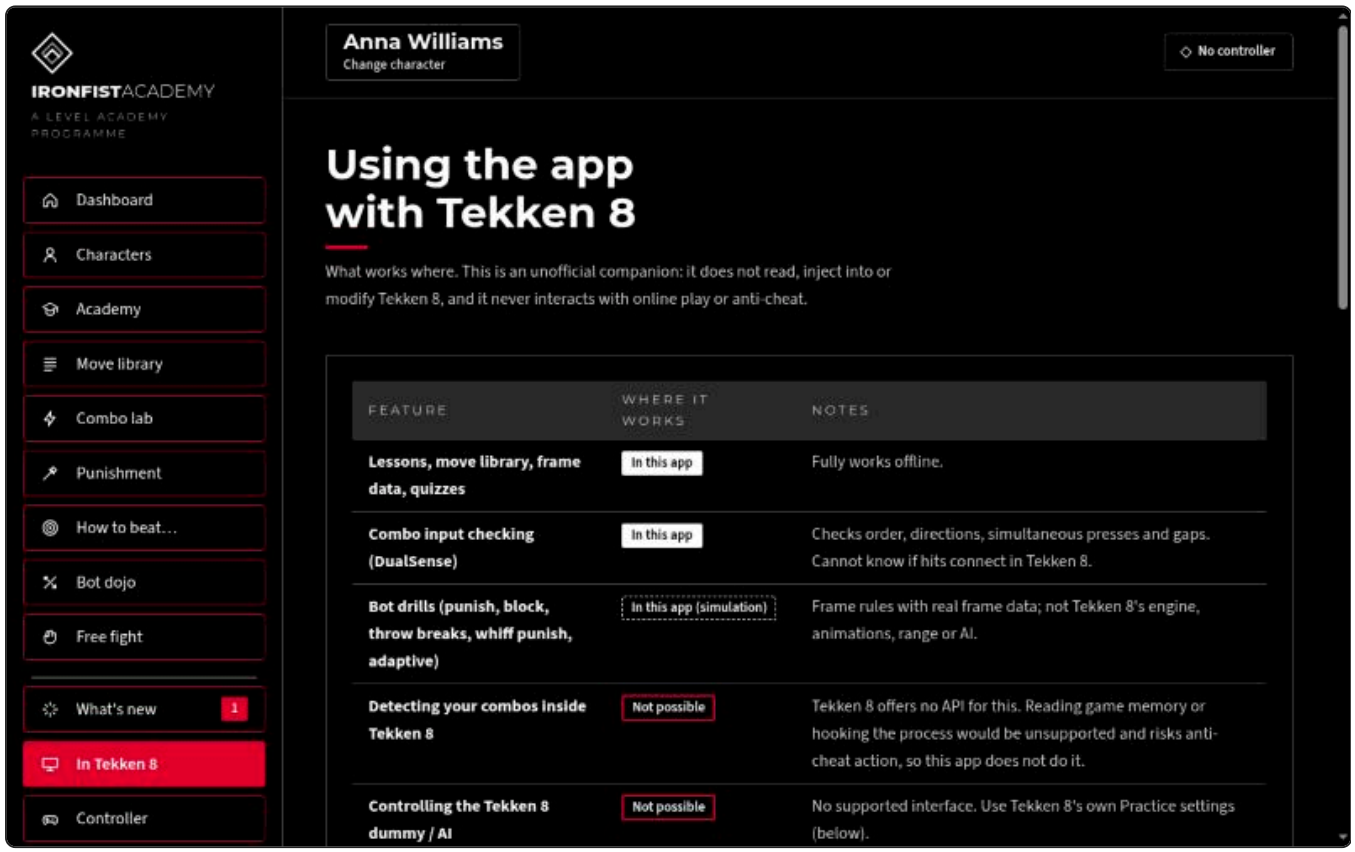

What it is: a full 3D match against a computer player, with health bars, Heat and Rage.

1. **You play**: choose your character. **Opponent**: choose who to fight, or click **Random**.
2. **Mode**: **Match** is a real fight; **Practice** gives you a dummy that does not fight back.
3. **Bot level**: easy, normal or hard. **Rounds to win**: 1, 2 or 3.
4. Click **Fight!**

To do this…	…press
Walk	forward or back (D / A on the keyboard)
Dash / back-dash	forward twice / back twice, quickly
Sidestep	tap up or down once
Block	hold back (highs and mids) or down-back (lows)
Break a throw	press 1, 2 or 1+2 when you get grabbed
Heat	2+3 (once per round)
Rage Art	df+1+2 when your health bar is very low

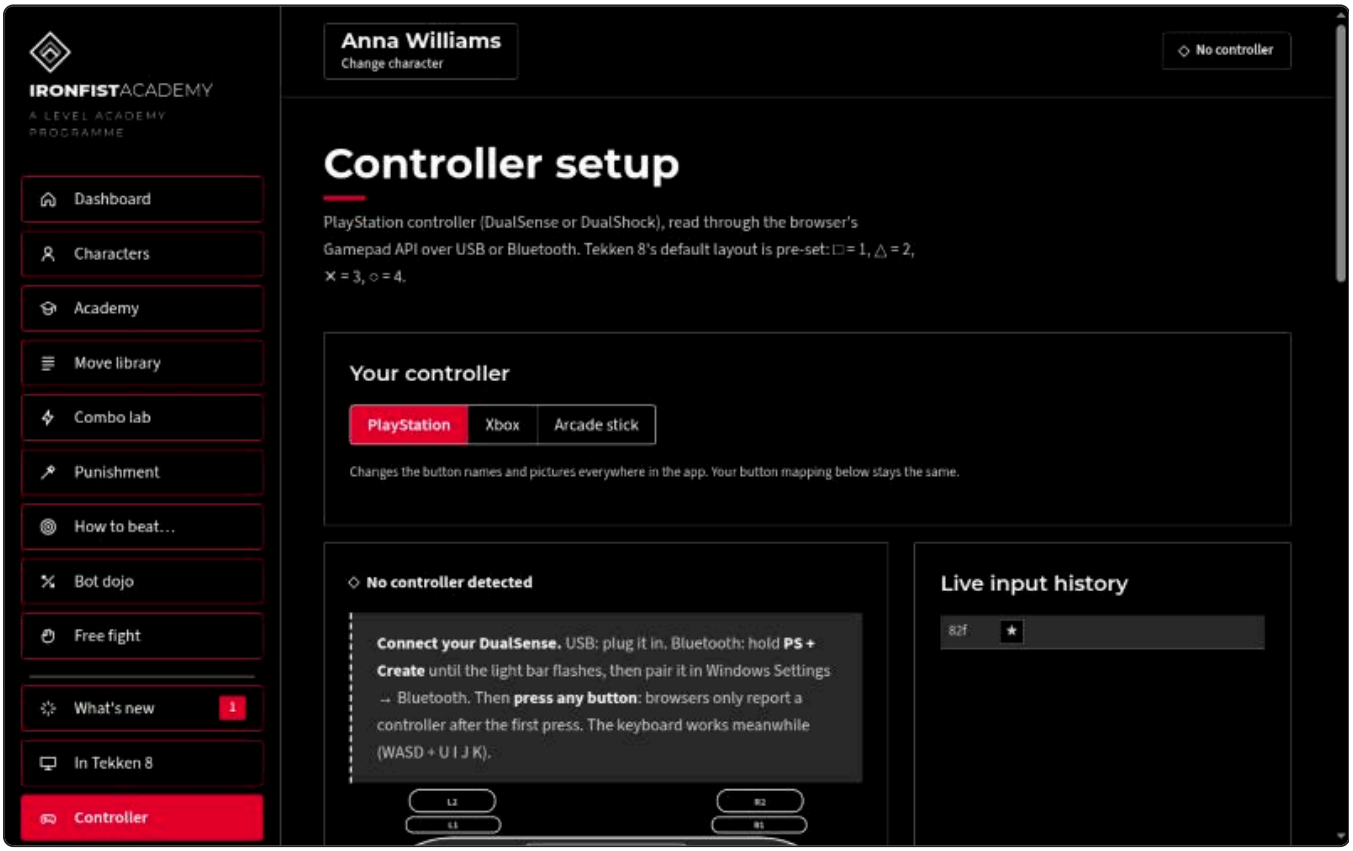

Click **Sound on** / **Sound off** to turn the fight sounds on or off.

In Tekken 8

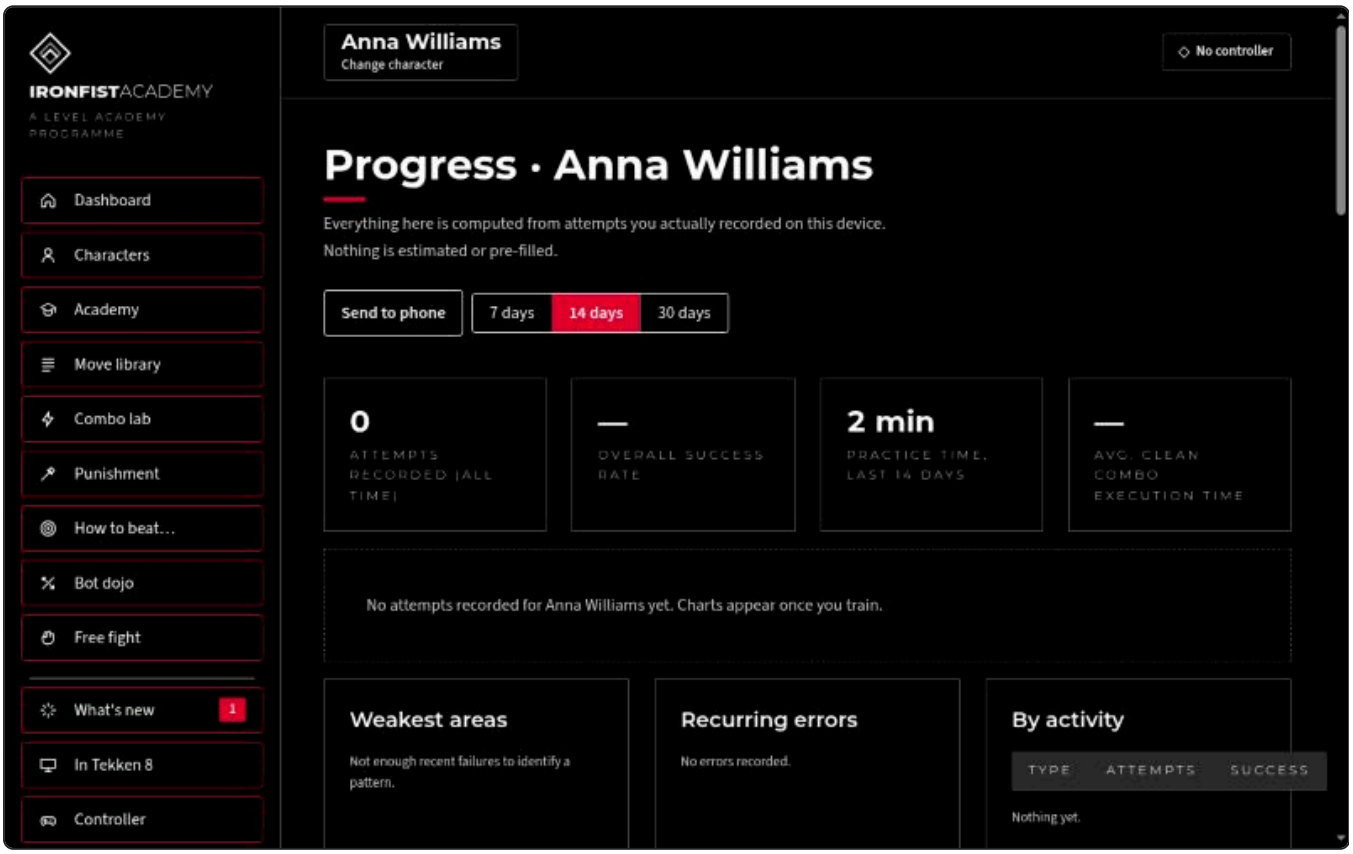

What it is: how to use this app together with the real game. The table shows what works where, and below are **recipes**: exact Practice-mode settings inside Tekken 8 to practise the same things. The app never touches the game or its anti-cheat.

Controller

What it is: setting up your controller. Full details are in **Part 6**.

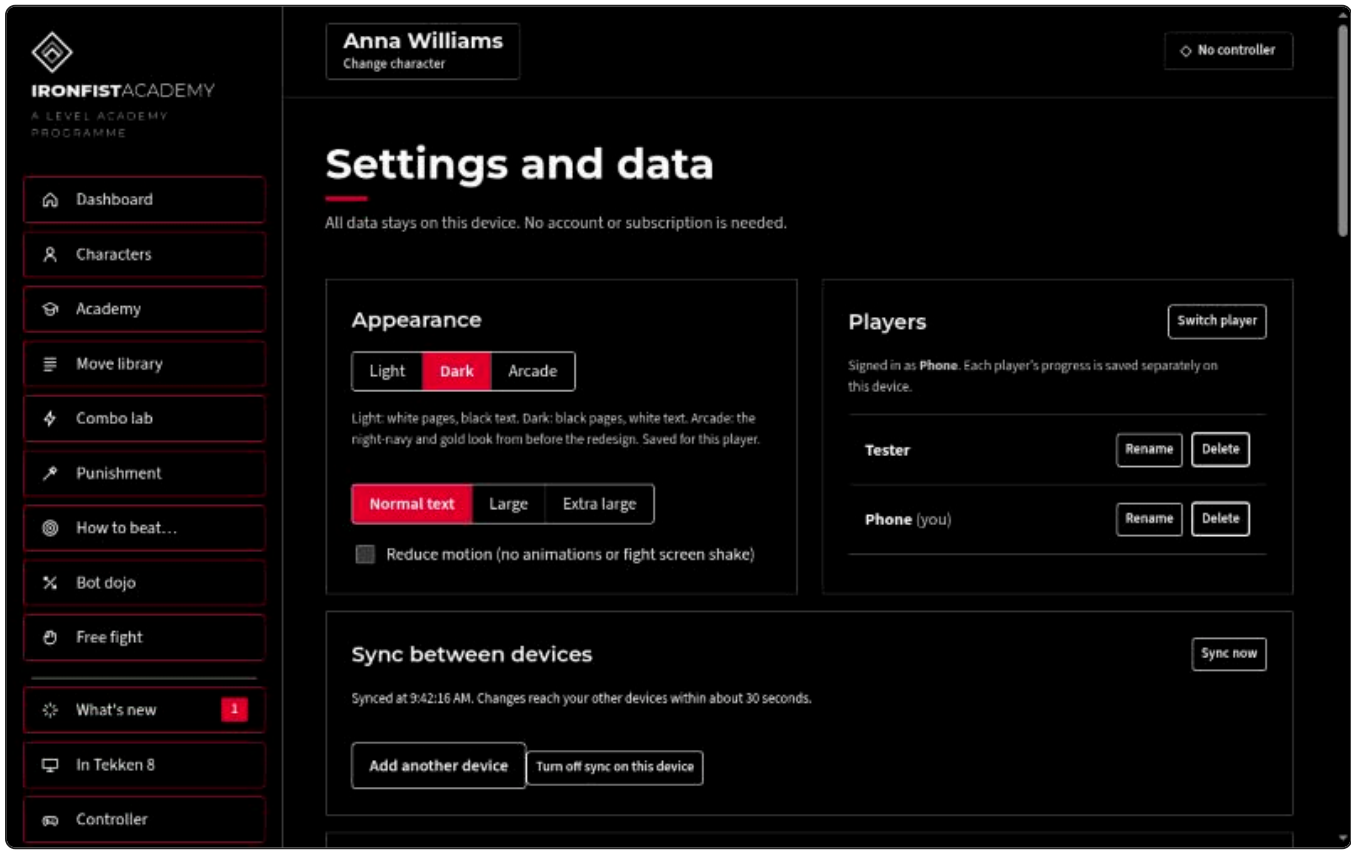

Progress

What it is: your training statistics for the active character: how many tries, how often you succeeded, practice time, your **weakest areas** and **mistakes you keep making**.

- **7 days / 14 days / 30 days**: how far back the charts look.
- **Send to phone** (computers): shows a QR code to copy your progress to a phone once (see Part 7).
- At the bottom: **Export all progress** saves a file with your progress; **Import progress…** loads one; **Reset** buttons erase progress.

Settings and data

Section	What you can do
Appearance	**Light** (white), **Dark** (black) or **Arcade** (navy and gold) colours. **Normal / Large / Extra large** text. **Reduce motion** turns off animations and screen shake.
Players	**Rename** or **Delete** a player, or **Switch player**.
Sync between devices	Keep your progress the same on all your devices (see Part 7).
Your data	Change the saving choice from the first start, reset one character's progress, or **Delete all data** on this device.
Mastery and progression	How strict the Academy is (for example 80% needed to pass).
Practice	Daily goal minutes and the session timer length.
Input recognition	Advanced: how strict the app is about timing. Leave it alone unless inputs feel unfair. **Defaults** puts it back.
Character data	**Check for updates** loads the newest move data.

Install the app

Downloads for the Windows and Linux apps. See Part 2. (Computers only.)

Credits and Privacy

At the bottom of the menu. **Credits** says where the data comes from (Wavu Wiki, free to use). **Privacy** explains exactly what is saved and where.

Part 6. Controllers and the keyboard

Connecting a controller

1. Plug the controller into the computer with its USB cable. (Bluetooth works too: pair it in your computer's Bluetooth settings first.)
2. Open the **Controller** tab.
3. **Press any button** on the controller. Browsers only see a controller after the first press.
4. The box at the top right changes from **No controller** to your controller's name, and the picture lights up when you press buttons.

Choose your type of controller

Under **Your controller**, click the one you have. The button pictures change everywhere in the app.

Type	Buttons are shown as	Tekken 1 · 2 · 3 · 4
PlayStation	Shapes	
Xbox	Coloured letters	
Arcade stick (fight board)	Round buttons with Tekken's numbers	

Arcade stick: top row of buttons = 1 2, bottom row = 3 4. The lever is your direction. If your stick has a switch, set it to **PS4/PS5** or **XInput** mode.

If a button does the wrong thing

1. On the Controller tab, scroll to **Button test** and press every button once. Each one should light the right box.
2. In **Tekken button assignment**, use the drop-downs to say which Tekken button (1, 2, 3, 4) each controller button is. Match it to the **Button Config** you use inside Tekken 8.
3. If a button lights the wrong box, use **Rebind** next to it and press the button you want.
4. **Tekken 8 default layout** puts everything back.

No controller? Use the keyboard

Key	Does	Key	Does
W or ↑	up	U	1 (left punch)
S or ↓	down	I	2 (right punch)
A or ←	left	J	3 (left kick)
D or →	right	K	4 (right kick)

Press two keys at once for two buttons (for example U + I for 1+2).

Part 7. Saving, players and syncing

Saving is automatic

You never need to press "save". Everything you do is saved by itself a moment later, on the device you are using.

Sync: the same progress on every device

With sync, your progress on the website, the desktop app and the phone app stays the same, all by itself. It uses a secret **sync code** instead of an email or password.

Turn it on (on your first device)

1. Sign in as your player. Open **Settings and data**.
2. Find **Sync between devices** and click **Turn on sync**.
3. It says **Synced at…**. Done.

Add another device

1. On the first device, click **Add another device**. A QR code and a code like `ABCD-EFGH-IJKL-…` appear.
2. On the other device, sign in (or make a player), open **Settings and data → Sync between devices**.
3. Type the code in the box (dashes and small letters are fine) and click **Join**.
4. Within a few seconds it shows **Synced at…** and your progress appears.

> **KEEP THE CODE SECRET**
> Anyone with your code can see and change that player's progress. Don't post it online.

- Changes reach your other devices within about 30 seconds, or straight away when you click **Sync now**.
- Nothing gets lost: for every lesson and combo, the best result from any device is kept.
- **Reset** a character on one device and it is reset on all of them.
- **Turn off sync on this device** stops it on that device only.

> **PHONE APP TIP**
> Type the code **inside** the installed phone app. Scanning the QR with the camera opens the browser instead of the app.

Send to phone (one-time copy)

On a computer, **Progress → Send to phone** shows a QR code. Point your phone's camera at it, tap the link, sign in and tap **Add to my progress**. This copies your progress once; it does not stay in sync. For automatic syncing, use the sync code above.

Back-up file

Progress → Export all progress saves a file. **Import progress…** loads it on another device or after a reset.

Deleting things

- **Settings → Players → Delete**: deletes one player and their progress.
- **Settings → Your data → Reset one character's progress**: starts that character from zero.
- **Settings → Your data → Delete all data**: deletes every player and all progress on this device.

All of these ask "Are you sure?" first, and none can be undone.

Part 8. Desktop app extras

The Windows and Linux apps have two extra buttons at the bottom of the menu on the left.

Import progress

A white button. It opens a small window with the steps to bring your website progress into the app with a file:

1. On the website: **Progress → Export all progress (JSON)**. Save the file.
2. In the app: click **Import progress**, then **Choose file…**, and pick that file.

Easier: use **sync** (Part 7) and it happens by itself.

Uninstall (red button)

1. Click the red **Uninstall** button at the bottom left.
2. A question appears. Tick **Also delete my players and saved progress** only if you want everything gone.
3. Click **Uninstall**. The app closes and removes itself.

Portable version: it cannot delete itself while running, so it shows you the file instead. Delete that file yourself (right-click → **Delete**).

You can also uninstall the Windows app the normal way: **Start → Settings → Apps → Installed apps → Iron Fist Academy → ··· → Uninstall**.

Part 9. Something went wrong? Fixes

Problem	What to do
"Windows protected your PC" when installing	Normal for small apps that don't pay for a certificate. Click **More info**, then **Run anyway**.
Controller not found ("No controller")	Press any button on it. Check the cable. Close Steam (it can take over controllers) and other controller programs. Try another USB port.
A button does the wrong move	Controller tab → **Button test** and **Tekken button assignment** (Part 6).
My progress is gone	Check you clicked the right player on the sign-in screen. If you chose **Don't save anything** at the start, change it in Settings → Your data.
Sync says "Could not sync"	Check the internet. Your progress is safe on the device and syncs again when the internet is back. Click **Sync now** to try again.
Sync code "not found"	Check you typed all 26 letters and numbers. Turn on sync on the first device before joining.
The phone app opens with a browser address bar	It was added as a shortcut. Delete the icon and install again choosing **Install** (Part 2).
Bot dojo / Free fight missing on the phone	On purpose: they need a controller or keyboard. Use a computer.
Something looks old or broken	Refresh: **F5** on a computer, or pull the page down on a phone. Desktop app: download the newest version.
Text is too small	Settings → Appearance → **Large** or **Extra large**.
A move's numbers look wrong	Move library → click the move → correct it in the details box.

Part 10. Your first week of training

Don't know where to start? Follow this.

1. **Day 1.** Pick one character you like on the **Characters** tab and set them as your **Favourite character** on the Dashboard. Do the grey **Fundamentals** lessons in the Academy.
2. **Day 2.** Academy: "Who is …?" and "Essential pokes". Look up those moves in the **Move library**.
3. **Day 3. Punishment** tab: answer 10 questions. Learn your -10 and -15 punishers by heart.
4. **Day 4. Combo lab**: pick a ★ combo, do it in **Step-by-step**, then **Slow practice**, then **Consistency**.
5. **Day 5. Bot dojo**: Standing punishment and Mid / low defence on easy.
6. **Day 6. How to beat…**: look up the character that beats you most online. Read "Punish these".
7. **Day 7. Free fight** on normal. Then look at **Progress** to see your weakest areas, and press **Continue training** on the Dashboard.

> **REMEMBER**
>
> Little and often beats a lot once. 15 minutes a day is great. Use the **practice session timer** on the Dashboard.

Iron Fist Academy is an unofficial fan tool, not affiliated with or endorsed by Bandai Namco. TEKKEN is a trademark of Bandai Namco Entertainment Inc. Frame data, combos and punisher tables: Wavu Wiki contributors (CC0). Website: gaberpet.github.io/iron-fist-academy
